

ASSET MANAGEMENT SYSTEM – FOR PORTS

When you need to easily view, manage and track marine and land-based assets

KEY BENEFITS

- Secure, customisable and GIS compliant
- Capable of managing both marine AND land-based assets
- Cost effective, quick and easy-to-use
- Helps you reduce risk, increase confidence and support operational decision making

Organisations large or small, need to maintain and control their assets in order to optimise utilisation throughout their lifetime. Get the most out of your assets, meet safety and quality standards and maximise ROI (Return on Investment) with this flexible system.

The **OceanWise Asset Management System** is an easy to use, customisable tool that allows you to view, track, share and manage your assets.

Versatile and adaptable to your requirements – you can either use it to manage a specific asset such as Aids to Navigation, moorings or buildings or deploy as a full asset management tool bringing all your land-based and marine assets together.

The **OceanWise** system comes with a range of key features built-in such as an interactive map interface, an API and easy integration with your other systems and desktop GIS.

Features

- View your assets on an interactive map
- Rich set of customisable and searchable attributes for each feature/asset type
- ENC production compliant
- Built in API (Application Programming Interface) allowing integration with your other systems and software
- Cloud based – allows multiple logins and access from anywhere with an internet connection
- Works with your desktop GIS
- Data management best practice methods built-in

The easy way to view, manage, share and track your assets
